Building a WWII Jeep

Finding, Restoring, and Rebuilding a Wartime Legend

Pen and Sword Military The Jeep as we know it from WW2 news reels, big screen movies and television shows such as M.A.S.H. or The Rat Patrol was the result of the US War Department's requirement for a light command-reconnaissance car to meet the US Army's needs under the threat of a looming European war. After only a few weeks of development the Jeep would end up in all of the Allied armies of the world courtesy of Bantam, Willys and Ford. Many of the Jeeps built during the war would go on to serve for over

60 years in various parts of the world in both military and civilian use. This book is a basic guide to building a WW2 Jeep using restored, rebuilt and modern reproduction parts for those who have never done it before, just as I hadn't either. You'll find a clear step by step process used to build a truly historical vehicle. Combined with the other books and websites that will be noted in this volume as well as some basic auto mechanical knowledge on your part you should be able to have your own piece of Jeep history rolling in no time.

The Yugo

The Rise and Fall of the Worst Car in History

Hill and Wang Six months after its American introduction in 1985, the Yugo was a punch line; within a year, it was a staple of late-night comedy. By 2000, NPR's Car Talk declared it "the worst car of the millennium." And for most Americans that's where the story begins and ends. Hardly. The short, unhappy life of the car, the men who built it, the men who imported it, and the decade that embraced and discarded it is rollicking and astounding, and one of the greatest untold business-cum-morality tales of the 1980s. Mix one rabid entrepreneur, several thousand "good" communists, a willing U.S. State Department, the shortsighted Detroit auto industry, and improvident bankers, shake vigorously, and you've got The Yugo: The Rise and Fall of the Worst Car in History. Brilliantly re-creating the amazing confluence of events that produced the Yugo, Yugoslav expert Jason Vuic uproariously tells the story of the car that became an international joke: The American CEO who happens upon a Yugo right when his company needs to find a new import or go under. A State Department eager to aid Yugoslavia's nonaligned communist government. Zastava Automobiles, which overhauls its factory to produce an American-ready Yugo in six months. And a hole left by Detroit in the cheap subcompact market that creates a race to the bottom that leaves the Yugo . . . at the bottom.

Ten Rules for Strategic Innovators

From Idea to Execution

Harvard Business Press Even world-class companies, with powerful and proven business models, eventually discover limits to growth. That's what makes emerging high-growth industries so attractive. Although they lack a proven formula for making a profit, these industries represent huge opportunities for the companies that are fast enough and smart enough. But constructing tomorrow's businesses while simultaneously sustaining excellence in today's, demands a delicate balance. It is a quest fraught with contradiction and paradox. Until now, there has been little practical guidance. Based on an in-depth, multiyear research study of innovative initiatives at ten large corporations, Vijay Govindarajan and Chris Trimble identify three central challenges: forgetting yesterday's successful processes and practices; borrowing selected resources from the core business; and learning how the new business can succeed. The authors make recommendations regarding staffing, leadership roles, reporting relationships, process design, planning, performance assessment, incentives, cultural norms, and much more. Breakthrough growth opportunities can make or break companies and careers. Ten Rules for Strategic Innovators is every leader's guide to execution in unexplored territory.
