Developmentalism and Dependency in Southeast Asia

The Case of the Automotive Industry

Routledge This book provides a detailed cross-country study of the automotive industry in South East Asia. Abbott argues that, contrary to prevailing opinion, the diffusion of manufacturing in the Asia-Pacific has been characterized by hierarchical networks of production linked to Japan for technology.

Technology Transfer and Economic Growth in Sub-Saharan African Countries

Lessons from East Asia

Springer This book provides a pragmatic analytical model grounded on the solid idea that technologies and the accompanying implementation efforts only make sense if they are successfully deployed in markets. The analytical model also provides an exhaustive analysis of all critical variables at the global, regional and national levels, which contribute to failure or success of technology transfer efforts. The model is validated by an incisive analysis of technology transfer experiences of Japan, Korea, Singapore, Taiwan (province of China), and Malaysia. While this book finds that these East Asian countries have had both diverging and converging models, and experiences with technology transfer, the enduring and fundamental aspects of technology transfer in specific industrial sectors and economic growth in these countries is then used to draw lessons for African countries. This book therefore is a timely and compelling piece of research work that provides valuable answers to the increasingly urgent question of how African countries can industrialize through technology transfer to meet their economic development and growth ideals.

How Asia Got Rich: Japan, China and the Asian Miracle

Japan, China and the Asian Miracle

Routledge Within a few short months in 1997, Asian economies that had been considered not only healthy but "miraculous" suddenly fell off a precipice as investors withdrew massively first from Asian currencies and, in rapid order, from equity markets across the region. On October 27 1997, the turmoil in Asian markets spooked Wall Street in the largest single-day decline in history, a drop of 550 points. It was predicted that the Asian crash could drive the US trade deficit from \$191 billion to \$300 billion by 1998, creating huge new tensions in relations with some of the largest US trading partners. These wrenching changes, following a generation of success, raise numerous questions about the steps that led to the crisis, its likely outcome and the limits and constraints of "Asian capitalism". Edith Terry presents a blow-by-blow account of the crisis, beginning with the 1996 collapse of the Bangkok Bank of Commerce. In her overview, she links the fall of the Asian miracle with the theme of globalization, arguing that the crisis demonstrates the urgency of dismantling restraints to trade, investment, and financial services, and that the United States should take leadership in pushing for new and sweeping reform through the World Trade Organization and in bilateral negotiations with its trading partners. The final section of the book deals with the rise of the "Asian miracle" - how the myth was created, who created it, why it succeeded for so long - and is informed by analysis of the Japanese prototype.

Production Networks in Asia and Europe

Skill Formation and Technology Transfer in the Automobile Industry

Routledge This book explores Japanese investment in Europe and Southeast Asia, in relation to the automobile industry. In Part I the authors examine industrial organization and policy issues in Thailand, Malaysia, The Philippines and Indonesia, looking at Japanese investment and the relative policy successes and failures in these host countries. Part II looks at skill formation systems in the Japanese dominated automobile industry in Southeast Asia and in Part III the authors focus on the EU and the very different influence of Japanese investment.

Globalization and the 'New' Semi-Peripheries

Springer **This collection re-examines and re-assesses the role of the semi-periphery in world politics and argues that the processes of globalization have led us to widen our understanding of the semi-periphery, through a range of case studies as well as theoretical chapters.**

Winning in Asia, Japanese Style

Market and Nonmarket Strategies for Success

Springer **Despite the regional currency crisis of 1997-1998, Asia-Pacific economies continue to be among the most attractive markets in the world. Japanese, American, and European firms have invested heavily in the past decades, and now are positioning themselves to take advantage of the post-Asian recovery, phenomenal Chinese growth rates, and deepening economic liberalization. This pathbreaking work focuses on understanding the market and nonmarket strategies employed by Japanese firms to boost their share of the developing Asian market and to rally the Japanese government in support of their initiatives. In addition to advancing a novel theoretical framework to analyze strategy, the book contains an overview chapter focuses on Japanese investment and trade trends in Asia and original case studies of the banking, automobile, telecommunications, chemical, software, and electronics sectors that provide insight into winning strategies in Asia.**

QUANTUM ENGINE

Trafford Publishing **In Quantum Engine, Zoltan J. Kiss builds upon the revolutionary ideas he introduced in his previous books, Energy Balance of Relativity and Quantum Energy and Mass Balance, and provides a blueprint for solving Earth's energy crisis. In this, his third book, Kiss takes the discussion of quantum energy and mass-energy balance to its logical conclusion—the quantum engine. Kiss's calculations prove that acceleration generates electricity. This energy comes from the transformation of blue-shift energy into electron flow. The quantum impact of Earth's gravitation on the speeding particles results in the generation of an electron surplus, a source of electricity. Kiss's groundbreaking original research demonstrates that this mass-energy balance approach is the key to unlocking Earth's energy future. The transformation of mass into energy and the retransformation of energy into mass can produce a limitless supply of energy via the quantum engine—our future source of energy.**

Industrial Technology Development in Malaysia

Industry and Firm Studies

Routledge **This book, and its companion, Technology, Competitiveness and the State, examine and evaluate Malaysian industrialization in terms of its experience of and prospects for industrial technology development. The focus is on the development of Malaysia's technological-industrial base from a sector and firm-specific perspective, including the role of foreign multinationals in this process. Industrial Technology Development in Malaysia, provides a valuable analysis of the technological development of a Newly Industrializing Country and reflects on whether existing development strategies can be maintained in the wake of the financial crises sweeping the East Asian economies.**

GRAVITATION

Trafford Publishing **Gravitation, the sphere symmetrical expanding acceleration of Earth means Earth's surface is "falling" under our feet! The surface of the Earth is accelerating together with us. We are taken by the surface of the Earth. Earth's surface is approaching us as if having been in "free fall." While we have all the evidence to prove it - through all of our everyday life and all of our actions - it is so strange that it is difficult to believe. We do not trust our intuition or experience, because it is so unbelievable. This book on**

Gravitation: our Quantum Treasure does not want to convince you of the truth of the above. The purpose of the book is to show that Nature is granting us the chance to use the infinite energy capacity of gravitation. The future is about motion and electricity generation, based on gravitation. The book's conclusions are based on process approach, on quantum energy and mass balance, on elementary (proton-, neutron-, electron-, quark- and other) processes, on the definition of time, and the understanding of intensity. Our life is constantly changing. The key is the balance. The book gives arguments and explanations, describes events on quantum basis. It provides the perspective for the utilisation of Gravitation: our Quantum Treasure.

Theory Of Satellite Fragmentation In Orbit

World Scientific For over half a century, an increasing number of satellites have fragmented in orbit, creating a large amount of hazardous orbital debris which threaten the safety of useful functioning satellites and space missions. This book discusses the theory behind these fragmentations followed by studies of actual cases. The book begins with a survey of satellite fragmentations in orbit and the consequent formation of orbital debris in chronological order. Next, the fundamental physical processes underlying satellite fragmentations are outlined and the methods of analyzing satellite fragmentations presented. The rest of the book presents analyses of the major satellite fragmentation events including accidental and intentional breakups, those due to explosions and collisions, as well as those belonging to the unknown category.

Accelerating DevSecOps on AWS

Create secure CI/CD pipelines using Chaos and AIOps

Packt Publishing Ltd **Build high-performance CI/CD pipelines that are powered by AWS and the most cutting-edge tools and techniques** Key Features Master the full AWS developer toolchain for building high-performance, resilient, and powerful CI/CD pipelines Get to grips with Chaos engineering, DevSecOps, and AIOps as applied to CI/CD Employ the latest tools and techniques to build a CI/CD pipeline for application and infrastructure Book Description Continuous integration and continuous delivery (CI/CD) has never been simple, but these days the landscape is more bewildering than ever; its terrain riddled with blind alleys and pitfalls that seem almost designed to trap the less-experienced developer. If you're determined enough to keep your balance on the cutting edge, this book will help you navigate the landscape with ease. This book will guide you through the most modern ways of building CI/CD pipelines with AWS, taking you step-by-step from the basics right through to the most advanced topics in this domain. The book starts by covering the basics of CI/CD with AWS. Once you're well-versed with tools such as AWS CodeStar, Proton, CodeGuru, App Mesh, SecurityHub, and CloudFormation, you'll focus on chaos engineering, the latest trend in testing the fault tolerance of your system. Next, you'll explore the advanced concepts of AIOps and DevSecOps, two highly sought-after skill sets for securing and optimizing your CI/CD systems. All along, you'll cover the full range of AWS CI/CD features, gaining real-world expertise. By the end of this AWS book, you'll have the confidence you need to create resilient, secure, and performant CI/CD pipelines using the best techniques and technologies that AWS has to offer. What you will learn Use AWS CodeStar to design and implement a full branching strategy Enforce Policy as Code using CloudFormation Guard and HashiCorp Sentinel Master app and infrastructure deployment at scale using AWS Proton and review app code using CodeGuru Deploy and manage production-grade clusters using AWS EKS, App Mesh, and X-Ray Harness AWS Fault Injection Simulator to test the resiliency of your app Wield the full arsenal of AWS Security Hub and Systems Manager for infrastructure security automation Enhance CI/CD pipelines with the AI-powered DevOps Guru service Who this book is for This book is for DevOps engineers, engineering managers, cloud developers, and cloud architects. Basic experience with the software development life cycle, DevOps, and AWS is all you need to get started.

Manufacturing Competitiveness in Asia

How Internationally Competitive National Firms and Industries Developed in East Asia

Routledge There are competing theories to explain the reasons behind the international competitiveness of manufacturing in Asia. Analysing these different theories will bring important lessons, not just for Asia, but for developing economies the world over. This lucid book studies industries and firms in East Asia and examines the major determinants of their economic performance. With contributions from such leading thinkers as Ha-Joon Chang and Rajah Rasiah, the book covers such themes as: *industrial policy and East Asia *Taiwan's information technology industry *The role of the government in technological capability building Manufacturing Competitiveness in Asia touches on many important themes and issues and as such will be of great interest to students, academics and policy-makers involved in industrial economics, international trade and Asian studies.

Japanese Foreign Investments, 1970-1998

Perspectives and Analyses

M.E. Sharpe Analyzes all aspects of foreign direct investment (FDI) made by Japan's multinational corporations (MNCs) in Asia, the EU and the USA. Perspectives are offered to explain the changing characteristics of Japan's FDI practices and these are supported by data compiled from government and MNC sources.

Japanese Foreign Investments, 1970-98: Perspectives and Analyses

Perspectives and Analyses

Routledge Drawing on numerous Japanese and non-Japanese primary and secondary sources, this highly informative book analyzes all aspects (both domestic and international) of foreign direct investment made by Japan's multinational corporations in Asia, the European Union, and the U.S. It covers the critical period from 1970 -- the point at which Japan's economy reached a level of global importance -- through 1998 -- the nadir of Japan's economic woes. The book offers numerous perspectives to explain the changing characteristics of Japan's FDI practices over the period. The text is well supported by some 50 figures and data tables compiled from both Japanese government ministries and multinational corporations.

Export Control

Multinationals, Technology and Localization in Automotive Firms in Asia

Routledge East Asia has led rapid economic growth in the last few decades with India joining them over the last five years. Automotive parts manufacturers have been an important component of domestic production in all these economies. Experts with several years of multi-disciplinary research experience on the field examine the actual and potential technological and localization implications of MNC operations in East Asia and India. The rich collection of country experiences are both original and incisive. This volume includes: Case studies from China, Japan, India, Thailand and Malaysia A study of the role of multinationals in Asian technology building An examination of the growing Chinese automobile sector Featuring leading academics from across Asia, this title is essential reading for those studying industrial growth in the continent's major economies.

Electrochemical Oxygen Reduction

Fundamental and Applications

Springer Nature This book discusses systematically the theoretical research and the applications of electrochemical oxygen reduction. Oxygen reduction reaction is a common issue in electrochemistry, but is also an important process involved in the field of energy, cryogenic fuel cells, metal-air cells, oxygen sensors and hydrogen peroxide preparation. This book is divided into 6 chapters; it starts with a description of dynamic mechanisms, followed by a detailed introduction on the related experimental methods and related catalyst preparation technology. By providing the basic methods and testing techniques, and by demonstrating their applications, it helps readers gain a better understanding of oxygen reduction reactions, making it a valuable resource for the industrialization of scientific research achievements. Accordingly, the book appeals to a broad readership, particularly graduate students, those working at universities and research organizations, and industrial researchers.

Andromeda

A War Beyond

Christian Faith Publishing, Inc. Far away in the distant galaxy of Andromeda, there is a confrontation that has lasted for over two hundred years. Two races in total conflict over a planet the size of Jupiter. A world encompassing unlimited resources that could sustain any race for life. Protagonists have lived on this world since the beginning of time, understanding its contents and its uses as this planet is on one side of their galaxy. The other side of this galaxy, the antagonist's planet, is the size of Mars, almost barren like the Sahara Desert. Antagonists want to claim this new world for themselves by getting rid of these humanoids, taking over their planet. Since their world's condition is deteriorating, they spread their dark wings in their own system, claiming the other four worlds, and taking their culture and their precious treasures like water, which life needs to thrive. To strike a blow on these humanoids, antagonists ignite a vile plot by sending three King Cruisers on a special mission, staking entitlement on this world and its entire system.
