MAKING EMBEDDED SYSTEMS

DESIGN PATTERNS FOR GREAT SOFTWARE

"O'Reilly Media, Inc." *Interested in developing embedded systems? Since they don't tolerate inefficiency, these systems require a disciplined approach to programming. This easy-to-read guide helps you cultivate a host of good development practices, based on classic software design patterns and new patterns unique to embedded programming. Learn how to build system architecture for processors, not operating systems, and discover specific techniques for dealing with hardware difficulties and manufacturing requirements. Written by an expert who's created embedded systems ranging from urban surveillance and DNA scanners to children's toys, this book is ideal for intermediate and experienced programmers, no matter what platform you use. Optimize your system to reduce cost and increase performance Develop an architecture that makes your software robust in resource-constrained environments Explore sensors, motors, and other I/O devices Do more with less: reduce RAM consumption, code space, processor cycles, and power consumption Learn how to update embedded code directly in the processor Discover how to implement complex mathematics on small processors Understand what interviewers look for when you apply for an embedded systems job "Making Embedded Systems is the book for a C programmer who wants to enter the fun (and lucrative) world of embedded systems. It's very well written—entertaining, even—and filled with clear illustrations." —Jack Ganssle, author and embedded system expert.*

ENGINEERING A SAFER WORLD

SYSTEMS THINKING APPLIED TO SAFETY

MIT Press *A new approach to safety, based on systems thinking, that is more effective, less costly, and easier to use than current techniques. Engineering has experienced a technological revolution, but the basic engineering techniques applied in safety and reliability engineering, created in a simpler, analog world, have changed very little over the years. In this groundbreaking book, Nancy Leveson proposes a new approach to safety—more suited to today's complex, sociotechnical, software-intensive world—based on modern systems thinking and systems theory. Revisiting and updating ideas pioneered by 1950s aerospace engineers in their System Safety concept, and testing her new model extensively on real-world examples, Leveson has created a new approach to safety that is more effective, less expensive, and easier to use than current techniques. Arguing that traditional models of causality are inadequate, Leveson presents a new, extended model of causation (Systems-Theoretic Accident Model and Processes, or STAMP), then shows how the new model can be used to create techniques for system safety engineering, including accident analysis, hazard analysis, system design, safety in operations, and management of safety-critical systems. She applies the new techniques to real-world events including the friendly-fire loss of a U.S. Blackhawk helicopter in the first Gulf War; the Vioxx recall; the U.S. Navy SUBSAFE program; and the bacterial contamination of a public water supply in a Canadian town. Leveson's approach is relevant even beyond safety engineering, offering*

techniques for “reengineering” any large sociotechnical system to improve safety and manage risk.

PRAXIS II BIOLOGY CONTENT KNOWLEDGE (5235) STUDY GUIDE 2019-2020

EXAM PREP AND PRACTICE TEST QUESTIONS FOR THE PRAXIS 5235 EXAM

Imagine a study guide actually designed for teachers! Because we know you've got a busy life, we've developed a study guide that isn't like other certification materials out there. With Cirrus Test Prep's unofficial Praxis II Biology Content Knowledge (5235) Study Guide 2019-2020: Exam Prep and Practice Test Questions for the Praxis 5235 Exam you get a swift but full review of everything tested on your certification exam. FREE online resources are also included with your study guide! Imagine having FREE practice questions, digital flash cards, study "cheat" sheets, and 35 test tips available anytime, anywhere on your cell phone or tablet. Cirrus Test Prep's resources will give you the push you need to pass your test the first time. ETS was not involved in the creation or production of this product, is not in any way affiliated with Cirrus Test Prep, and does not sponsor or endorse this product. Cirrus Test Prep's Praxis II Biology Content Knowledge (5235) Study Guide 2019-2020 includes a comprehensive REVIEW of: Molecular and Cellular Biology Genetics and Evolution Biological Classification Animals Plants Ecology The Nature of Science Technology and Social Perspectives ...as well as a FULL practice test. About Cirrus Test Prep Developed by experienced current and former educators, Cirrus Test Prep's study materials help future educators gain the skills and knowledge needed to successfully pass their state-level teacher certification exams and enter the classroom. Each Cirrus Test Prep study guide includes: a detailed summary of the test's format, content, and scoring; an overview of the content knowledge required to pass the exam; worked-through sample questions with answers and explanations; full-length practice tests including answer explanations; and unique test-taking strategies with highlighted key concepts. Cirrus Test Prep's study materials ensure that new educators feel prepared on test day and beyond.

SOFTWARE MODELING AND DESIGN

UML, USE CASES, PATTERNS, AND SOFTWARE ARCHITECTURES

Cambridge University Press *This book covers all you need to know to model and design software applications from use cases to software architectures in UML and shows how to apply the COMET UML-based modeling and design method to real-world problems. The author describes architectural patterns for various architectures, such as broker, discovery, and transaction patterns for service-oriented*

architectures, and addresses software quality attributes including maintainability, modifiability, testability, traceability, scalability, reusability, performance, availability, and security. Complete case studies illustrate design issues for different software architectures: a banking system for client/server architecture, an online shopping system for service-oriented architecture, an emergency monitoring system for component-based software architecture, and an automated guided vehicle for real-time software architecture. Organized as an introduction followed by several short, self-contained chapters, the book is perfect for senior undergraduate or graduate courses in software engineering and design, and for experienced software engineers wanting a quick reference at each stage of the analysis, design, and development of large-scale software systems.

LEARNING MATHEMATICS

Princeton, N.J. : International Assessment of Educational Progress, Educational Testing Service In 1990-91, 20 countries (Brazil, Canada, China, England, France, Hungary, Ireland, Israel, Italy, Jordan, Korea, Mozambique, Portugal, Scotland, Slovenia, Soviet Union, Spain, Switzerland, Taiwan, and the United States) surveyed the mathematics and science performance of 13-year-old students (and 14 countries also assessed 9-year-olds in the same subjects) as part of the second International Assessment of Educational Progress (IAEP) Project. While recognizing the fundamental differences from country to country, the participants assembled tests that focus on the common elements of their curriculums, and in order to form the contexts for interpreting the student achievement data, they added sets of questions about students' home background and classroom experiences and the characteristics of the schools they attended. Results are reported in six chapters that discuss the following: (1) the mathematics performance of 13-year-olds; (2) results organized around topics featured in the curriculum; (3) results reporting students' and administrators' perceptions of teaching practices and their relationship to student performance; (4) information about the backgrounds of students and how they spend their time outside of school; (5) information about physical, demographic, and socioeconomic characteristics and the educational systems of the participating countries; and (6) the mathematics performance of 9-year-olds. Other sections present highlights of the findings discussed in detail in the main chapters, information about the participating countries, a procedural appendix discussing the research methods used by the countries, and a data appendix providing tables of results reported in the main chapters. MANLEY'S TECHNOLOGY OF BISCUITS, CRACKERS AND COOKIES

Elsevier *Manley's Technology of Biscuits, Crackers and Cookies is widely regarded as the standard work in its field. Part one covers management issues such as HACCP, quality control, process control and product development. Part two deals with the selection of raw materials and ingredients. The range and types of biscuits is covered in part three, while part four covers the main production processes and equipment, from bulk handling and metering of ingredients to packaging, storage and waste management. Eight expert authors have joined Duncan Manley in extensively updating and expanding the book, which is now some 25% longer than the previous edition. Part one now includes a new chapter on sustainability in the biscuit industry and the discussion of process and efficiency control is more detailed. In part two the information on wheat flour has been extensively revised to reflect recent developments and there are entirely new chapters on fats and oils and packaging materials. Photographs*

of the major types of biscuits now illustrate chapters in part three, which also includes a newly-composed chapter on the position of biscuits in nutrition. Finally, part four has been comprehensively reviewed and revised with the assistance of an author from a major machinery manufacturer. With its distinguished editor and team of expert contributors this new edition consolidates the position of Manley's *Technology of Biscuits, Crackers and Cookies* as the standard reference work in the industry.
