### PERSPECTIVES ON BIAS IN MENTAL TESTING

---

Springer Science & Business Media The cultural-test-bias hypothesis is one of the most important scientific questions facing psychology today. Briefly, the cultural-test-bias hypothesis contends that all observed group differences in mental test scores are due to a built-in cultural bias of the tests themselves; that is, group score differences are an artifact of current psychometric methodology. If the cultural-test-bias hypothesis is ultimately shown to be correct, then the 100 years or so of psychological research on human differences (or differential psychology, the scientific discipline underlying all applied areas of human psychology including clinical, counseling, school, and industrial psychology) must be reexamined and perhaps dismissed as confounded, contaminated, or otherwise artifactual. In order to continue its existence as a scientific discipline, psychology must confront the cultural-test-bias hypothesis from the solid foundations of data and theory and must not allow the resolution of this issue to occur solely within (and to be determined by) the political Zeitgeist of the times or any singular work, no matter how comprehensive. In his recent volume *Bias in Mental Testing* (New York: Free Press, 1980), Arthur Jensen provided a thorough review of most of the empirical research relevant to the evaluation of cultural bias in psychological and educational tests that was available at the time that his book was prepared. Nevertheless, Jensen presented only one perspective on those issues in a volume intended not only for the scientific community but for intelligent laypeople as well.

### COGNITIVE ASSESSMENT

---

---

#### A MULTIDISCIPLINARY PERSPECTIVE

---

Springer Science & Business Media This volume is an outgrowth of an invitational conference held in October 1991 on the main campus of Texas A&M University and sponsored by a grant from the Dean's Office of the College of Education. The expressed purpose of the conference was to allow researchers from too often disparate areas of research related to individual differences to come together and discuss their approaches to the topic, share ideas, and critique their differing paradigms to shorten the time it takes for researchers in parallel disciplines to discover advances that may aid their own work. We sought to bring together world-class psychometricians and statisticians, cognitive scientists, and neuroscientists focused on the common theme of individual differences. Each reviewed advances in his or her own work that has clear implications for enhancing our understanding of individual differences - from defining and partitioning variance components to modeling individual differences to structural and functional cortical variations that produce individual differences. The Chair of the Department of Educational Psychology at Texas A&M University, Bruce Thompson, took a lead role along with Victor L.

### MEASUREMENT AND ASSESSMENT IN EDUCATION

---

Allyn & Bacon This text employs a somewhat "traditional" approach to the study of educational tests and measurement so that teachers will understand essential psychometric concepts and be able to apply them in the classroom. The principles that guide the development of this text are (1) What essential knowledge and skills do classroom teachers need to conduct student assessments in a professional manner, and (2) What does the research on educational assessment tell us? This focus has resulted in a uniquely approachable, but technically accurate presentation of the material. While providing a slightly more technical presentation of the material than more basic texts, this text is both approachable and comprehensive. The text includes a gentle introduction to the basic mathematics of measurement, and expands traditional coverage to include a thorough discussion of performance and portfolio assessments, a complete presentation of assessment accommodations for students with disabilities, and a practical discussion of professional best practices in educational measurement.

### **MASTERING MODERN PSYCHOLOGICAL TESTING**

---

#### **THEORY AND METHODS**

---

**Springer Nature** This book provides a comprehensive introduction to psychological assessment and covers areas not typically addressed in existing test and measurements texts, such as neuropsychological assessment and the use of tests in forensics settings. The book introduces the vocabulary of the profession and the most basic mathematics of testing early as being fundamental to understanding the field. Numerous examples are drawn from tests that the authors have written or otherwise helped to develop, reflecting the authors' deep understanding of these tests and their familiarity with problems encountered in test development, use, and interpretation. Following the introduction of the basic areas of psychometrics, the book moves to areas of testing that represent various approaches to measuring different psychological constructs (memory, language, executive function, etc.), with emphasis on the complex issue of cultural bias in testing. Examples of existing tests are given throughout the book; however, this book is not designed to prepare students to go out and administer, score, and interpret specific psychological tests. Rather, the purpose of this book is to provide the foundational core of knowledge about tests, measurement, and assessment constructs, issues, and quantitative tools. Explains what constitutes a psychological test, how tests are developed, how they are best used, and how to evaluate their strengths and weaknesses; Describes areas of testing that represent different approaches to measuring different psychological constructs; Explains applications of psychological testing to issues in the courts; Addresses how test authors and publishers design and research tests to address the difficult and demanding issues of cultural differences in test performance and interpretation of test results.

### **HANDBOOK OF PSYCHOLOGICAL ASSESSMENT**

---

Elsevier The field of psychological assessment has been undergoing rapid change. The second edition of this Handbook, published in 1990, appeared at the beginning of a decade marked by extensive advances in assessment in essentially all of its specialized areas. There are many new tests, new applications of established tests, and new test systems. Major revisions have appeared of established tests, notably the Wechsler intelligence scales. The time seemed right for a third edition, since even over the relatively brief period of ten years, many tests described in the second edition have been replaced, and are no longer commonly used. Furthermore, much new research in such areas as neuropsychology, cognitive science, and psychopathology have made major impacts on how many tests and other assessment procedures are used and interpreted. This third edition represents an effort to give the reader an overview of the many new developments in assessment, while still maintaining material on basic psychometric concepts in order for it to continue to serve as a comprehensive handbook for the student and professional.

A cannon. A strap. A piece. A biscuit. A burner. A heater. A chopper. A gat. A hammer A tool for RULE Or, you can call it a gun. That's what fifteen-year-old Will has shoved in the back waistband of his jeans. See, his brother Shawn was just murdered. And Will knows the rules. No crying. No snitching. Revenge. That's where Will's now heading, with that gun shoved in the back waistband of his jeans, the gun that was his

brother's gun. He gets on the elevator, seventh floor, stoked. He knows who he's after. Or does he? As the elevator stops on the sixth floor, on comes Buck. Buck, Will finds out, is who gave Shawn the gun before Will took the gun. Buck tells Will to check that the gun is even loaded. And that's when Will sees that one bullet is missing. And the only one who could have fired Shawn's gun was Shawn. Huh. Will didn't know that Shawn had ever actually USED his gun. Bigger huh. BUCK IS DEAD. But Buck's in the elevator? Just as Will's trying to think this through, the door to the next floor opens. A teenage girl gets on, waves away the smoke from Dead Buck's cigarette. Will doesn't know her, but she knew him. Knew. When they were eight. And stray bullets had cut through the playground, and Will had tried to cover her, but she was hit anyway, and so what she wants to know, on that fifth floor elevator stop, is, what if Will, Will with the gun shoved in the back waistband of his jeans, MISSES. And so it goes, the whole long way down, as the elevator stops on each floor, and at each stop someone connected to his brother gets on to give Will a piece to a bigger story than the one he thinks he knows. A story that might never know an END...if Will gets off that elevator. Told in short, fierce staccato narrative verse, Long Way Down is a fast and furious, dazzlingly brilliant look at teenage gun violence, as could only be told by Jason Reynolds.

#### **TEST POLICY AND THE POLITICS OF OPPORTUNITY ALLOCATION: THE WORKPLACE AND THE LAW**

---

[Springer Science & Business Media](#) Bernard R. Gifford In the United States, the standardized test has become one of the major sources of information for reducing uncertainty in the determination of individual merit and in the allocation of merit-based educational, training, and employment opportunities. Most major institutions of higher education require applicants to supplement their records of academic achievements with scores on standardized tests. Similarly, in the workplace, as a condition of employment or assignment to training programs, more and more employers are requiring prospective employees to sit for standardized tests. In short, with increasing frequency and intensity, individual members of the political economy are required to transmit to the opportunity marketplace scores on standardized examinations that purport to be objective measures of their and potential. In many instances, these test scores are the abilities, talents, only signals about their skills that job applicants are permitted to send to prospective employers. THE NATIONAL COMMISSION ON TESTING AND PUBLIC POLICY In view of the importance of these issues to our current national agenda, it was proposed that the Human Rights and Governance and the Education and Culture Programs of the Ford Foundation support the establishment of a "blue ribbon" National Commission on Testing and Public Policy to investigate some of the major problems as well as the untapped opportunities created by recent trends in the use of standardized tests, particularly in the workplace and in schools.
