Fire Smart Home Handbook

Preparing for and Surviving the Threat of Wildfire

Rowman & Littlefield As climate change continues to wreak havoc on the environment, devastating wildfires, both natural and manmade, are increasing. The figure for average acres burned has increased from almost 2 million acres in 1992 to nearly 7 million in 2012, which set a new record with an average of 165 acres burned per fire. Things are heating up, but global warming isn't the only problem. Budgets for fire suppression have been slashed severely. The number of air tankers has decreased from 44 in 2002 to just 9 in 2012, which means fast attacks on fledgling fires will grow more difficult in the future. If you live in a wildland-urban interface, the zone between unoccupied and developed land, sooner or later fire will happen. Fortunately you can prepare for the worst, and it doesn't have to cost a fortune. This highly detailed and practical reference guide will help you live more safely in the red zone and save you time and money along the way, providing multiple methods of risk mitigation along with the financial level of each action. Effectively prepping your land can even enhance the scenery and increase the value of your home. Learn how wildfires begin and behave, how to evaluate your property, what essential tools you'll need and what they will cost, how to prepare your land and home--including tips on how to avoid insurance nightmares--when to stay and fight, when it's time to evacuate, how to clean up after a fire event, and more. Even if you live in the middle of a suburb, the information on how fires start and spread and how to deal with insurance claims will prove enlightening and helpful. No one can guarantee that your house or land will survive if a major conflagration erupts, but you can greatly improve your odds with this book and a little preparation.

The proposal for a national policy statement on ports

fifth report of session 2009-10, report, together with formal minutes, oral and written evidence

The Stationery Office National Policy Statements (NPS) are a key component of the new planning system for nationally significant infrastructure projects, introduced by the Planning Act 2008. The Act stipulates that a proposal for a National Policy Statement will be subject to public consultation and allows for parliamentary scrutiny before designation as national policy by the Secretary of State. The draft Ports National Policy Statement (Department for Transport, 2009) has been welcomed by many organisations as a good start which can be built upon. The Committee has recommended a number of modifications and expects the Department will improve the draft as a result of the consultation and scrutiny processes. The Committee has reservations regarding the Government's 2007 policy for ports and the lack of guidance on location for port development in the NPS but this, of itself, does not make the NPS unfit for purpose. But the Committee cannot recommend designation at this stage on two counts. Firstly, a key, related policy statement - the National Networks NPS - has yet to be published. Secondly, the organisation likely to be one of the principal decision-makers for port development - the Marine Management Organisation - has yet to be established and so has been unable to comment on guidance that will be of great importance to its role. These are fundamental flaws in the consultation process and the Ports NPS should not be designated until they are rectified.

Radar Instruction Manual

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardized up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. Design Thinking

Can Akdeniz The present world is service oriented. Without a proper structure, no system can work, and services cannot be rendered successful. Moreover, for the proper structure, the practice of design thinking is the perfect answer. Design thinking is not a newly emerged concept and remains rooted in society for a very long time. The concept of design thinking is useful for designing and understanding context relating to any businesses. Design thinking may seem vague and a capable subject for all; however, the same is not true and requires thorough planning. If general reports are to be taken, design thinking has five stages, and each stage has its importance. Design thinking brings out the creativity of a person, and the scope of the same has widened in the modern day, where one encounters various problems even in day-to-day activities. Design thinking is a way to attain success and is an essential factor of development and growth.
