## Recent Economic Developments

International Monetary Fund *This paper describes economic developments in Grenada during the 1990s. The weak growth performance since 1990 reflected largely a continuous contraction in agricultural output, which declined each year from 1989 to 1993. The construction industry experienced a major contraction in 1992 owing to the sharp fall in public investment. In 1993, output declined in the mining and quarrying, construction, and manufacturing sectors as well as in agriculture. In contrast, the hotel and restaurant sector has exhibited strong growth since the late 1980s, with real value added growing by 13.8 percent, on average, each year since 1989.*

## How Posters Work

Cooper Hewitt *How Posters Work* is more than a standard exhibition catalogue. Conceived as a useful and illuminating primer in visual thinking, it explores principles of design through a range of historical and contemporary works, uncovering ideas relevant not just to the design of posters but to 2D design more generally. *How Posters Work* has a unique focus on visual language. Rather than provide a history of the genre or a compilation of collectibles, the book is organized around active design principles. Concepts such as "Simplify," "Focus the eye," "Exploit the diagonal," "Reverse expectations," and "Say two things at once" are illustrated with a diverse range of posters, from avant-garde classics and rarely seen international works to contemporary pieces by today's leading graphic designers. Illustrated with over 150 works from the collection of Cooper Hewitt, Smithsonian Design Museum, *How Posters Work* provides a stunning education in seeing and making, demonstrating how some of the world's most creative designers have mobilized principles of layout, composition, psychology, and rhetoric to produce powerful acts of visual communication

## The GMO Deception

# What You Need to Know about the Food, Corporations, and Government Agencies Putting Our Families and Our Environment at Risk

*Simon and Schuster* *Seventy-five percent of processed foods on supermarket shelves—from soda to soup, crackers to condiments—contain genetically engineered ingredients. The long-term effects of these foods on human health and ecology are still unknown, and public concern has been steadily intensifying. This new book from the Council for Responsible Genetics gathers the best, most thought-provoking essays by the leading scientists, science writers, and public health advocates. Collectively, they address such questions as: Are GM foods safe and healthy for us? Will GM food really solve world hunger? Who really controls the power structure of food production? Are GM foods ecologically safe and sustainable? Why is it so difficult to get GM foods labeled in the US? What kinds of regulations and policies should be instituted? How is seed biodiversity, of lack thereof, affecting developing countries? Should animals be genetically modified for food? How are other countries handling GM crops? Ultimately, this definitive book encourages us to think about the social, environmental, and moral ramifications of where this particular branch of biotechnology is taking us, and what we should do about it.*

## Extreme Economies

## What Life at the World's Margins Can Teach Us about Our Own Future

*To predict our future, we must look to the extremes. So argues the economist Richard Davies, who takes readers to the margins of the modern economy and beyond. These extreme economies illustrate the forces that test human resilience, drive societies to failure, and promise to shape our collective future. Reviving a foundational idea from the medical sciences, Extreme Economies turns the logic of modern economics on its head by arguing that these outlier societies can teach us more about our own than we might imagine. By adapting to circumstances unimaginable to most of us, the people in these societies are pioneering the economic infrastructure of the future.*
