## The Star Gate Archives

## Reports of the United States Government Sponsored Psi Program, 1972-1995. Volume 2: Remote Viewing, 1985-1995

*McFarland* Star Gate is the largest funded program in the history of psi research receiving about \$19.933 million in funding from 1972 to 1995. Researchers from SRI International, and later at Science Applications International Corporation, in association with various U.S. intelligence agencies participated in this program. Using the remote viewing method, research focused on understanding the applicability and nature of psi in general but mostly upon informational psi. Volume 1: Remote Viewing (1972-1984) and Volume 2: Remote Viewing (1985-1995) include all aspects of RV including laboratory trials and several operational results. Volume 3 focuses on laboratory investigations on psychokinesis. Volume 4: Operational Remote Viewing: Government Memorandums and Reports includes an analysis of the applied remote viewing program and a selection of documents that provide a narrative on the behind the scenes activities of Star Gate. In a total of 504 separate missions from 1972 to 1995, remote viewing produced actionable intelligence prompting 89% of the customers to return with additional missions. The Star Gate data indicate that informational psi is a scientifically valid phenomenon. These data have led to the development of a physics and neuroscience based testable model for the underlying mechanism, which considers informational psi as a normal, albeit atypical, phenomenon. The Star Gate data found insufficient evidence to support the causal psi (psychokinesis) hypothesis.

## Supporting Requirements Communication for Shared Understanding by Applying Vision Videos in Requirements Engineering

*Logos Verlag Berlin GmbH* Requirements engineering (RE) has the overall goal of establishing the vision of the system in its relevant context. For this goal, all stakeholders must disclose, discuss, and align their mental models of the system by explicitly communicating their goals, ideas, needs, and expectations. This procedure serves to develop and negotiate a shared understanding and is called requirements communication. In this thesis, I analyze the application of videos as a documentation option in RE to support effective requirements communication for shared understanding. Videos used for this purpose are called vision videos. Based on a technology transfer process, I develop a candidate solution consisting of the two concepts video as a by-product and awareness and guidance. The first concept supports the revision of RE practices by integrating video production and use to obtain videos as a by-product with low effort and sufficient quality. The second concept helps software professionals with video production and use by creating awareness regarding video quality and providing guidance on how to proceed. Each concept is first validated in academia before the entire candidate solution is validated in a case study in the industry. The findings from academia and industry indicate that the candidate solution helps software professionals to gain the required awareness, knowledge, and ability to produce and use vision videos at moderate costs and with sufficient quality. These videos are suitable for the intended purpose of supporting requirements communication for shared understanding. *Arihant Publications India limited*

## Improving Literacy in the Primary School

*Routledge* One of the most important challenges teachers face is making sure children can read. It is an absolutely crucial skill, and current educational policy is giving it a very high priority. Based on one of the largest studies ever undertaken of what primary schools do to improve literacy, this book reports what Professor Ted Wragg and his research team found. The importance placed on literacy has never been greater. When children learn to read, they are laying the foundations for their entire educational future. Effective teachers can make a huge difference, as a poor start can hinder children throughout their schooling and beyond. By looking at what actually goes on in classrooms, this volume provides an invaluable insight into what happens to children and how their reading progresses. It shows how particular teachers manage the improvement of their pupils' reading levels, and also follows individual pupils through a school year. This is a very readable account of a fascinating and crucial area of research that is highly topical. Every class teacher should read it.
