SCALE-UP MANUAL, THE: HANDBOOK FOR INNOVATORS, ENTREPRENEURS, TEAMS AND FIRMS

World Scientific It is widely accepted that innovation holds the key to sustainable commercial growth globally, but in practice there is limited understanding of how to successfully exploit its full commercial and social value. The Scale-up Manual provides a unified approach to manage the creation and commercialisation of innovative products and services, enabled by four data-driven building blocks: the Triple Chasm Model, modified commercialisation readiness levels, meso-economic vectors and the commercialisation canvas. The approach supports different strategies

for resource allocation, ranging from 'lean' techniques to sustainability initiatives based on the circular economy. The Manual includes many case studies and insights, which different 'Actors' can use at different points along the commercialisation journey.

REDEFINING GEEK

BIAS AND THE FIVE HIDDEN HABITS OF TECH-SAVVY TEENS

University of Chicago Press A surprising and deeply researched look at how everyone can develop tech fluency by focusing on five easily developed learning habits. Picture a typical computer geek. Likely white, male, and someone you'd say has a "natural instinct" for technology. Yet, after six years teaching technology classes to first-generation, low-income middle school students in Oakland, California, Cassidy Puckett has seen firsthand that being good with technology is not something people are born with—it's something they learn. In *Redefining Geek*, she overturns the stereotypes around the digitally savvy and identifies the habits that can help everyone cultivate their inner geek. Drawing on observations and interviews with a diverse group of students around the country, Puckett

zeroes in on five technology learning habits that enable tech-savvy teens to learn new technologies: a willingness to try and fail, management of frustration and boredom, use of models, and the abilities to use design logic and identify efficiencies. In *Redefining Geek*, she shows how to measure and build these habits, and she demonstrates how many teens historically marginalized in STEM are already using these habits and would benefit from recognition for their talent, access to further learning opportunities, and support in career pathways. She argues that if we can develop, recognize, and reward these technological learning habits in all kids—especially girls and historically marginalized racial and ethnic groups—we can address many educational inequities and disparities in STEM. Revealing how being good with technology is not about natural ability but habit and persistence, *Redefining Geek* speaks to the ongoing conversation on equity in technology education and argues for a more inclusive technology learning experience for all students.

CLOSED CAPTIONING

SUBTITLING, STENOGRAPHY, AND THE DIGITAL CONVERGENCE OF TEXT WITH TELEVISION

JHU Press This engaging study traces the development of closed captioning—a field that emerged in the 1970s and 1980s from decades-long developments in cinematic subtitling, courtroom stenography, and education for the deaf. Gregory J. Downey discusses how digital computers, coupled with human mental and physical skills, made live television captioning possible. Downey's survey includes the hidden information workers who mediate between live audiovisual action and the production of visual track and written records. His work examines communication technology, human geography, and the place of labor in a technologically complex and spatially fragmented world. Illustrating the ways in which technological development grows out of government regulation, education

innovation, professional profit-seeking, and social activism, this interdisciplinary study combines insights from several fields, among them the history of technology, human geography, mass communication, and information studies.
