IDENTITY

CONTEMPORARY IDENTITY POLITICS AND THE STRUGGLE FOR RECOGNITION

Currently in Bill Gates's bookbag and FT Books of 2018Increasingly, the demands of identity direct the world's politics. Nation, religion, sect, race, ethnicity, gender: these categories have overtaken broader, inclusive ideas of who we are. We have built walls rather than bridges. The result: increasing in anti-immigrant sentiment, rioting on college campuses, and the return of open white supremacy to our politics. In 2014, Francis Fukuyama wrote that American and global institutions were in a state of decay, as the state was captured by powerful interest groups. Two years later, his predictions were

borne out by the rise to power of a series of political outsiders whose economic nationalism and authoritarian tendencies threatens to destabilise the entire international order. These populist nationalists seek direct charismatic connection to 'the people', who are usually defined in narrow identity terms that offer an irresistible call to an in-group and exclude large parts of the population as a whole. Identity is an urgent and necessary book: a sharp warning that unless we forge a universal understanding of human dignity, we will doom ourselves to continual conflict.

Over 200 worked examples and more than 1,300 end of chapter problems provide the use opportunities to practice solving problems related to concepts in the text. Provides the reader with clear presentations of the fundamental principles of basic and applied engineering thermodynamics. Helps students develop engineering problem solving skills through the use of structured problem-solving techniques. Introduces the Second Law of Thermodynamics through a basic entropy concept, providing students a more intuitive understanding of this key course topic. Covers Property Values before the First Law of Thermodynamics to ensure students have a firm understanding of property data before using them. Over 200 worked examples and more than 1,300 end of chapter problems offer students extensive opportunity to practice solving problems. Historical Vignettes, Critical Thinking boxes and Case Studies throughout the book help relate abstract concepts to actual engineering applications. For greater instructor flexibility at exam time, thermodynamic tables are provided in a separate accompanying booklet. Available online testing and assessment component helps students assess their knowledge of the topics. Email textbooks@elsevier.com for details.

JESUITS AND MATRIARCHS

DOMESTIC WORSHIP IN EARLY MODERN CHINA

In early modern China, Jesuit missionaries associated with the male elite of Confucian literati in order to proselytize more freely, but they had limited contact with women, whose ritual spaces were less accessible. Historians of Catholic evangelism have similarly directed their attention to the devotional practices of men, neglecting the interior spaces in Chinese households where women worshipped and undertook the transmission of Catholicism to family members and friends. Nadine Amsler's investigation brings the domestic and devotional practices of women into sharp focus, uncovering a rich body of evidence that demonstrates how Chinese households functioned as sites of evangelization, religious conflict, and indigenization of Christianity. The resulting exploration of gendered realms in seventeenth-century China reveals networks of religious sociability and ritual communities among women as well as women's remarkable acts of private piety. Amsler's exhaustive archival research and attention to material culture reveals new insights about women's agency and domestic activities, illuminating areas of Chinese and Catholic history that have remained obscure, if not entirely invisible, for far too long.

JUSTICE AND THE POLITICS OF DIFFERENCE

Princeton University Press In this classic work of feminist political thought, Iris Marion Young challenges the prevailing reduction of social justice to distributive justice. The starting point for her critique is the experience and concerns of the new social movements that were created by marginal and excluded groups, including women, African Americans, and American Indians, as well as gays and lesbians. Young argues that by assuming a homogeneous public, democratic theorists fail to consider institutional arrangements for including people not culturally identified with white European male norms. Consequently, theorists do not adequately address the problem of an inclusive participatory framework. Basing her vision of the good society on the culturally plural networks of contemporary urban life, Young makes the case that normative theory and public policy should undermine group-based oppression by affirming rather than suppressing social group differences. Danielle Allen's new foreword contextualizes Young's work and explains how debates surrounding social justice have changed since — and been transformed by — the original publication of *Justice and the Politics of Difference*.

INTERNATIONAL LAW AS A LANGUAGE FOR INTERNATIONAL RELATIONS

Springer

SMALL CHANGE

ABOUT THE ART OF PRACTICE AND THE LIMITS OF PLANNING IN CITIES

Routledge What exactly is 'small change'? Build a bus stop in an urban slum and a vibrant community sprouts and grows around it - that is the power of small changes that have huge positive effects. This book is an argument for the wisdom of the street, the ingenuity of the improvisers and the long-term, large-scale effectiveness of immediate, small-scale actions. Written by Nabeel Hamdi, the guru of urban participatory development and the master of the art, *Small Change* brings over three decades of experience and knowledge to bear on the question 'what is practice?'. Through an easy-to-read narrative style, and using examples from the North and South, the author sheds light on this question and the issues that stem from it - issues relating to political context, the lessons of the 'informal city', and the pursuit of learning that challenges convention. The result is a comprehensive, yet imaginative, guide to the forms of knowledge, competencies and ways of thinking that are fundamental to skilful practice in urban development. This is powerful, informed, critical and inspiring reading for practitioners in the field, students and teachers of urban development, those who manage international aid and everyone looking to build their community.

STUDIES IN HISTORICAL LINGUISTICS AND LANGUAGE CHANGE. GRAMMATICALIZATION, REFUNCTIONALIZATION AND BEYOND

MDPI The present volume examines the usefulness of a particular set of concepts and processes of change studying their applicability to a range of linguistic changes in Spanish and Latin that cannot be easily or can only be partially accounted for within the framework of grammaticalization. Rather than challenging the insights of grammaticalization theory, the different contributions to this monograph demonstrate that exaptation, capitalization, refunctionalization and adfunctionalization, as well as changes motivated by rhetorical guidelines, constitute interesting and valuable notions that allow for a better understanding of specific language changes in Spanish and, by extension, of language change in general.

BIOLOGICAL THERMODYNAMICS

Cambridge University Press This inter-disciplinary guide to the thermodynamics of living organisms has been thoroughly revised and updated to provide a uniquely integrated overview of the subject. Retaining its highly readable style, it will serve as an introduction to the study of energy transformation in the life sciences and particularly as an accessible means for biology, biochemistry and bioengineering undergraduate students to acquaint themselves with the physical dimension of their subject. The emphasis throughout the text is on understanding basic concepts and developing problem-solving skills. The mathematical difficulty increases gradually by chapter, but no calculus is required. Topics covered include energy and its transformation, the First Law of Thermodynamics, Gibbs free energy, statistical thermodynamics, binding equilibria and reaction kinetics. Each chapter comprises numerous illustrative examples taken from different areas of biochemistry, as well as a broad range of exercises and references for further study.
