#### **SUSAN HAACK: REINTEGRATING PHILOSOPHY**

---

*Springer This volume documents the 17th Münster Lectures in Philosophy with Susan Haack, the prominent contemporary philosopher. It contains an original, programmatic article by Haack on her overall philosophical approach, entitled 'The Fragmentation of Philosophy, the Road to Reintegration'. In addition, the volume includes seven papers on various aspects of Haack's philosophical work as well as her replies to the papers. Susan Haack has deeply influenced many of the debates in contemporary philosophy. In her vivid and accessible way, she has made ground-breaking contributions covering a wide range of topics, from logic, metaphysics and epistemology, to pragmatism and the philosophy of science and law. In her work, Haack has always been very sensitive in detecting subtle differences. The distinctions she has introduced reveal what lies at the core of philosophical controversies, and show the problems that exist with established views. In order to resolve these problems, Haack has developed some 'middle-course approaches'. One example of this is her famous 'Foundherentism', a theory of justification that includes elements from both the rival theories of Foundationalism and Coherentism. Haack herself has offered the best description of her work calling herself a 'passionate moderate'.*

## **THE SUNSET OF SCIENCE AND THE RISEN SON OF TRUTH**

---

AuthorHouse In a unique work of literature, author Calvin W. Allison presents *The Sunset of Science and the Risen Son of Truth*. The book contains a very stylistic compilation of important topics presented in various forms of writing, including diverse styles of poetry, illustrations, scenarios, analogies, articles, a deeply insightful novella, and a revision of his personal biography. While the Gospel is the centerpiece in this thought-provoking project, the subject matter also branches out to touch on science, politics, environmental issues, and a smidgen of other topics that will align together in a compatible fashion. Calvin wants to open up the readers understanding on a variety of issues while simultaneously expanding their thought process so that they will be able to distinguish between truth and fiction in a time when distortions are regularly passed through the airwaves of the media outlets. The novella included in this work is titled *Mental Dexterity*. It is a highly informative tale of a talk-show host named Cal, who, in a time when distortions are frequently broadcast to the general public as reliable news, has a keen sense of detecting truth by making connections in details that aren't meant to be connected. While some are critical of Cal's ability, referring to it as forming perception puzzles, others are threatened by what he is able to perceive, and soon he finds himself in deep societal waters. So brace yourself for the momentum. Because you're about to be engulfed in a mental sphere of intrigue while being intellectually saturated in a stimulating shower of well-prepped penmanship articulated to communicate important information that will work to strengthen your understanding on life-affecting issues.

### **PHILOSOPHICAL APPROACHES**

---

Broadview Press This new anthology includes both classic and contemporary readings on the methods and scope of science. Jeffrey Foss depicts science in a broadly humanistic context, contending that it is philosophically interesting because it has reshaped nearly all aspects of human culture—and in so doing has reshaped humanity as well. While providing a strong introduction to epistemological and metaphysical issues in science, this text goes beyond the traditional topics, enlarging the scope of philosophical engagement with science. Substantial introductions and critical questions are provided for each reading.

### **DARWIN'S WATCH**

---

---

### **THE SCIENCE OF DISCWORLD III: A NOVEL**

---

Anchor When Charles Darwin writes the wrong book and reverses the progress of science, Unseen University's wizards must once again save Roundworld (Earth, that is) from an apocalyptic end. Ever since a wizardly experiment inadvertently brought about the creation of Roundworld, the wizard scholars of Unseen University have done their best to put things on the right course. In *Darwin's Watch* they may face their greatest challenge yet: A man called Darwin has written a bestselling book called *The Theology of the Species*, and his theory of scientific design has been witlessly embraced by Victorian society. As a result, scientific progress has slowed to a crawl, and the wizards must find a way to change history back to the way it should have been. *DARWIN'S WATCH EXPLORES THE REVERBERATIONS* of major scientific advances on our planet and our culture, the dangers of obscurantism, and the theory of evolution as you have never seen it before. This brilliant addition to Pratchett's beloved Discworld

series illustrates with great wit and wisdom how the laws of our universe truly are stranger than fiction.

### **EVOLUTION, THE LOGIC OF BIOLOGY**

---

John Wiley & Sons By focusing on the cellular mechanisms that underlie ontogeny, phylogeny and regeneration of complex physiologic traits, *Evolution, the Logic of Biology* demonstrates the use of homeostasis, the fundamental principle of physiology and medicine, as the unifying mechanism for evolution as all of biology. The homeostasis principle can be used to understand how environmental stressors have affected physiologic mechanisms to generate condition-specific novelty through cellular mechanisms. *Evolution, the Logic of Biology* allows the reader to understand the vertebrate life-cycle as an intergenerational continuum in support of effective, on-going environmental adaptation. By understanding the principles of physiology from their fundamental unicellular origins, culminating in modern-day metazoans, the reader as student, researcher or practitioner will be encouraged to think in terms of the prevention of disease, rather than in the treatment of disease as the eradication of symptoms. By tracing the ontogeny and phylogeny of this and other phenotypic homologies, one can perceive and understand how complex physiologic traits have mechanistically evolved from their simpler ancestral and developmental origins as cellular structures and functions, providing a logic of biology for the first time. *Evolution, the Logic of Biology* will be an invaluable resource for graduate students and researchers studying evolutionary development, medicine and biology, anthropology, comparative and developmental biology, genetics and genomics, and physiology.

#### **GROW IN SPIRITUAL AWARENESS OF LIFE HERE AND HEREAFTER**

---

Agio Publishing House "When I finished reading this book, all I could say was WOW! What a stunning piece of literary work... It is concise, brilliantly written, backed by scientific findings, with clear human logic and intelligence. If this doesn't awaken the masses to delve into who and what they truly are, I can't imagine what will." ~ Jerry Issa, teacher of metaphysics, Trenton, Michigan This book will change your life if you let it. If we are accidental beings on a remote planet in a vast universe, existing for merely a blip in cosmic time, what's the point of living at all? Until we learn life is too significant to be a short-lived brilliance that rises out of nothing and ends in nothing, we will continue to live out our lives in, what Thoreau saw as, quiet desperation. We sense the materialistic wall when we ask the question, "Is that all there is?" Without resorting to miracles or magic, this book provides compelling evidence of life beyond the physical world by logically investigating the limitations of matter in the universe, by examining the gaps in scientific theories and by analyzing what the mystics already know about a spiritual existence. It takes a dedicated seeker with no preconceived ideas and no intent on arriving to see beyond the materialistic wall. This book is intended to expand your awareness of life here and hereafter, hopefully providing the spark that will start you on your own personal pilgrimage. The mystics tell us we will be guided to the next step along our spiritual path when we are ready. Are you ready? AWARENESS: The following might be the thoughts of those at different levels of awareness as they walk through a rose garden. I want - I wonder how much I could get for these roses. I believe - God created roses when He created the world and everything in it. I doubt - Roses evolved from wild flowering shrubs, but most garden varieties are hybrids. I seek - How could anything as beautiful as a rose happen purely by chance? I know - Roses, like all life on Earth, are physical manifestations of spirit.

### **COHERENCE IN THOUGHT AND ACTION**

---

MIT Press This book is an essay on how people make sense of each other and the world they live in. Making sense is the activity of fitting something puzzling into a coherent pattern of mental representations that include concepts, beliefs, goals, and actions. Paul Thagard proposes a general theory of coherence as the satisfaction of multiple interacting constraints, and discusses the theory's numerous psychological and philosophical applications. Much of human cognition can be understood in terms of coherence as constraint satisfaction, and many of the central problems of philosophy can be given coherence-based solutions. Thagard shows how coherence can help to unify psychology and philosophy, particularly when addressing questions of epistemology, metaphysics, ethics, politics, and aesthetics. He also shows how coherence can integrate cognition and emotion.

## QUANTUM MECHANICS, CELL-CELL SIGNALING, AND EVOLUTION

---

*Elsevier Quantum Mechanics, Cell-Cell Signaling, and Evolution offers a detailed accounting of the latest research and theorizing on the integration of quantum physics with biological action to produce a novel perspective on evolution. The book advocates for a paradigm shift towards understanding biology and medicine causally as predictive sciences, presenting quantum mechanics and physiology as vertically integrated. The author has taken a unique approach to the question of how and why evolution occurred. The account is based on extensive knowledge of lipid physical chemistry, and its role in the evolution of the lung under the influence of hormonal effects on structure and function. The title arranges lipid biochemistry and biophysics into an integrated explanation, guiding readers from the immersion of lipids in water as the origin of life, to lung surfactant in alveolar homeostasis, and leading to a new understanding of how consciousness interacts with the laws of nature. This volume argues for a novel understanding of evolutionary processes based on fundamental science and positions itself as seeking consilience among research disciplines. Starting from the origins of the cosmos, the author proceeds through nucleosynthesis and Endosymbiosis Theory, to finally describe consciousness in relation to natural law. Offers a novel account of evolutionary mechanisms integrating quantum mechanics and cell-cell signaling Presents the latest research and theorizing on the integration of quantum physics with biological action Grounds theoretical insights in lipid physical chemistry and the evolution of the lung Details an integrated, causal account of evolution operating across physical and biological domains Argues for a paradigm shift in the way evolution is understood*

## THE EVOLUTION OF CONSCIOUSNESS

---

### REPRESENTING THE PRESENT MOMENT

---

*Bloomsbury Publishing The Evolution of Consciousness brings together interdisciplinary insights from philosophy, neuroscience, psychology and cognitive science to explain consciousness in terms of the biological function that grounds it in the physical world. Drawing on the novel analogy of a house of cards, Paula Droege pieces together various conceptual questions and shows how they rest on each other to form a coherent, structured argument. She asserts that the mind is composed of unconscious sensory and cognitive representations, which become conscious when they are selected and coordinated into a representation of the present moment. This temporal representation theory deftly bridges the gap between mind and body by highlighting that physical systems are conscious when they can respond flexibly to actions in the present. With examples from evolution, animal cognition, introspection and the free will debate, this is a compelling and animated account of the possible explanations of consciousness, offering answers to the conceptual question of how consciousness can be considered a cognitive process.*

## CONTROVERSY CATASTROPHISM AND EVOLUTION

---

### THE ONGOING DEBATE

---

*Springer Science & Business Media In Controversy, Trevor Palmer fully documents how traditional gradualistic views of biological and geographic evolution are giving way to a catastrophism that credits cataclysmic events, such as meteorite impacts, for the rapid bursts and abrupt transitions observed in the fossil record. According to the catastrophists, new species do not evolve gradually; they proliferate following sudden mass extinctions. Placing this major change of perspective within the context of a range of ancient debates, Palmer discusses such topics as the history of the solar system, present-day extraterrestrial threats to earth, hominid evolution, and the fossil record.*

## THE SYMBOLIC SPECIES: THE CO-EVOLUTION OF LANGUAGE AND THE BRAIN

---

*W. W. Norton & Company "A work of enormous breadth, likely to pleasantly surprise both general readers and experts."—New York Times Book Review This revolutionary book provides fresh answers to long-standing questions of human origins and consciousness. Drawing on his breakthrough research in comparative neuroscience, Terrence Deacon offers a wealth of insights into the significance of symbolic thinking: from the co-evolutionary exchange between language and brains over two million years of hominid evolution to the ethical repercussions that followed man's newfound access to other*

---

people's thoughts and emotions. Informing these insights is a new understanding of how Darwinian processes underlie the brain's development and function as well as its evolution. In contrast to much contemporary neuroscience that treats the brain as no more or less than a computer, Deacon provides a new clarity of vision into the mechanism of mind. It injects a renewed sense of adventure into the experience of being human.

### **BRITTY BRITTY BANG BANG: ONE MAN'S ATTEMPT TO UNDERSTAND HIS COUNTRY**

---

Headline Hugh Dennis has secretly been worrying about what being "British" meant for nearly a decade, ever since his friend Ardal O'Hanlon had told him in passing that he was the most British person he had ever met. Hugh was unclear whether he was being praised, teased, vaguely insulted or possibly all three - because it has always been very difficult to know how to feel about being British. And then the London Olympics came along. We gave the world a gleaming new vision of Britain; a smiling Britain of achievement, a Britain responsible for leading the world into the modern era through the Agrarian and Industrial revolutions, a nation proud to embrace multi-culturalism, individuality, and eccentricity. A country where a major politician can dangle helplessly from a zip wire like a discarded straw dolly and gain in popularity, and whose Queen can send herself up and then descend by parachute. The unexpected legacy of the Games has been a Britain with a new found self-confidence in which we all know how to be British. A Britain which should be embarrassed by nothing and proud of everything, from sheep to chimneys to the Spice Girls to industrial action and what had always previously been described as our "ailing transport network". A Britain which having been pinned firmly in its own half, has dribbled the length of the field, nutmegged the defenders, unleashed a curling dipping shot into the top right hand corner, scored a wonder goal and is now kissing the badge. This is Hugh Dennis' exploration of the changing image of Britain and Britishness.

### **TEACHING ABOUT EVOLUTION AND THE NATURE OF SCIENCE**

---

National Academies Press Today many school students are shielded from one of the most important concepts in modern science: evolution. In engaging and conversational style, Teaching About Evolution and the Nature of Science provides a well-structured framework for understanding and teaching evolution. Written for teachers, parents, and community officials as well as scientists and educators, this book describes how evolution reveals both the great diversity and similarity among the Earth's organisms; it explores how scientists approach the question of evolution; and it illustrates the nature of

science as a way of knowing about the natural world. In addition, the book provides answers to frequently asked questions to help readers understand many of the issues and misconceptions about evolution. The book includes sample activities for teaching about evolution and the nature of science. For example, the book includes activities that investigate fossil footprints and population growth that teachers of science can use to introduce principles of evolution. Background information, materials, and step-by-step presentations are provided for each activity. In addition, this volume: Presents the evidence for evolution, including how evolution can be observed today. Explains the nature of science through a variety of examples. Describes how science differs from other human endeavors and why evolution is one of the best avenues for helping students understand this distinction. Answers frequently asked questions about evolution. Teaching About Evolution and the Nature of Science builds on the 1996 National Science Education Standards released by the National Research Council--and offers detailed guidance on how to evaluate and choose instructional materials that support the standards. Comprehensive and practical, this book brings one of today's educational challenges into focus in a balanced and reasoned discussion. It will be of special interest to teachers of science, school administrators, and interested members of the community.

## DESIGN EVOLUTION

---

### THEORY INTO PRACTICE : A HANDBOOK OF BASIC DESIGN PRINCIPLES APPLIED IN CONTEMPORARY DESIGN

---

Rockport Pub Presents diverse, international, in-depth case studies. While there are many books showcasing graphic design work, few present in-depth projects, exploring concept, designer's strategy, visual problem-solving, and specifics, illustrating the concrete use of design principles to achieve intended communication goals. As a result, readers are often left with only a surface understanding of how a project might have evolved or how the visual aspects of its design are brought together to convey its intended message. The case studies in Design Evolution comprehensively demonstrate the real-world application of visual principles discussed in a more formal, educational context. Readers will understand how the principles for image, layout, type, and color explored in volume 1, Design Elements, work in combination, to execute the overall solutions showcased in this volume. The depth and range of content presented in these case studies distinguishes this book from all others in the design showcase genre -- offering readers a chance to not only be inspired by the quality and innovation of showcased projects, but to understand how they were realized.

### A LADY OF DISTINCTION: THE PHILOSOPHER RESPONDS TO HER CRITICS

---

Prometheus Books The book on Susan Haack's philosophy is a welcome achievement in a grand tradition, as in the series of volumes of 'The Library of Living Philosophers.' Here, too, the multifaceted contributions by a distinguished philosopher are analyzed in turn by nearly a score of feisty scholars, each of whom then is answered by Susan Haack's illuminating reply. Altogether, a feast.-GERALD HOLTON, Mallinckrodt Research Professor of Physics; Research Professor of History of Science, Harvard University; Author of Thematic Origins of Scientific Thought: Kepler to Einstein and Science and Anti-Science As is well known, Susan Haack combines the fullest technical professionalism in philosophy with a commitment to vigorous participation in debate on large public issues. Her special gift is her ability to bring the former to bear on the latter. This well-conceived collection brings out the force and energy of her thinking.-LORD ANTHONY QUINTON, Former President of Trinity College, Oxford; Former Chairman of the British Library Board and the author of Humel In this critical appraisal of the work of philosopher Susan Haack, editor Cornelis de Waal has assembled sixteen original essays from outstanding international contributors together with responses from Haack on the points raised. The contributors address most of Haack's key publications, from her early writings on metaphysics to her most recent work in the philosophy of science and the philosophy of law. Topics include: the revisability of logic, the role of emotion in reasoning, scientific integrity, postmodernism and the law, the relation of science to religion, preferential hiring, multiple aspects of Haack's foundherentism, and her crossword analogy. The volume also includes an extensive interview with Haack, which traces the development of her thought, and a complete bibliography of her work. For anyone seeking a better understanding of the work of this important philosopher, this unique collection offers many invaluable insights. Cornelis de Waal (Indianapolis, IN) is associate editor at the Peirce Edition Project and associate professor of philosophy, both at Indiana University-Purdue University Indianapolis. He is the author of On Pragmatism, On Mead, and On Peirce in the Wadsworth Philosophers Series; the editor of American New Realism 1910-1920; and the assistant editor of Writings of Charles S. Peirce: A Chronological Edition, Volume 6: 1886-1890.

## BUILDING FOR WAR

---

### THE EPIC SAGA OF THE CIVILIAN CONTRACTORS AND MARINES OF WAKE ISLAND IN WORLD WAR II

---

Casemate The story of the Americans who came under attack five hours after Pearl Harbor was hit: "Intriguing, informative, gripping, and at times very moving" (Naval Historical Foundation). This intimately researched work tells the story of the thousand-plus Depression-era civilian contractors who came to Wake Island, a remote Pacific atoll, in 1941 to build an air station for the US Navy—charting the contractors' hard-won progress as they scramble to build the naval base, as well as runways for US Army Air Corps B-17 Flying Fortresses, while war clouds gather over the Pacific. Five hours after their attack on Pearl Harbor, the Japanese struck Wake Island, which was now isolated from assistance. The undermanned Marine Corps garrison, augmented by civilian-contractor volunteers, fought back against repeated enemy attacks, at one point thwarting a massive landing assault. The atoll was under siege for two weeks as its defenders continued to hope for the US Navy to come to their rescue. Finally succumbing to an overwhelming amphibious attack, the surviving Americans, military and civilian, were taken prisoner. While most were shipped off to Japanese POW camps for slave labor, a number of the civilians were retained as workers on occupied Wake. Later in the war, the last ninety-eight Americans were brutally massacred by their captors. The civilian contractors who had risked distance and danger for well-paying jobs ended up paying a steep price: their freedom and, for many, their lives. Written by the daughter and granddaughter of civilians who served on Wake Island, Building for War sheds new light on why the United States was taken by surprise in December 1941, and shines a spotlight on the little-known, virtually forgotten story of a group of civilian workers and their families whose lives were forever changed by the events on this tiny atoll.

**THE JUSTIFICATION OF SCIENCE AND THE RATIONALITY OF RELIGIOUS BELIEF**

---

*Oxford University Press, USA In this critical examination of recent accounts of the nature of science and of its justification given by Kuhn, Popper, Lakatos, Laudan, and Newton-Smith, Banner contends that models of scientific rationality which are used in criticism of religious beliefs are in fact often inadequate as accounts of the nature of science. He argues that a realist philosophy of science both reflects the character of science and scientific justifications, and suggests that religious belief could be given a justification of the same sort.*
