#### **NATURE-BASED SOLUTIONS FOR RESTORATION OF ECOSYSTEMS AND SUSTAINABLE URBAN DEVELOPMENT**

---

*MDPI This volume examines the applicability of nature-based solutions in ecological restoration practice and in contemporary landscape architecture by bringing together ecology and architecture in the built environment. Green infrastructure is used to address urban challenges such as climate change adaptation, disaster risk reduction, and stormwater management. In addition, thermal comfort nature-based solutions reintroduce critical connections between natural and urban systems. In light of ongoing developments in sustainable urban development, the goal is a paradigm shift towards a landscape that restores and rehabilitates urban ecosystems. The ten contributions to this book examine a wide range of successful cases of designing healthier, greener and more resilient landscapes in different geographical contexts, from the United States of America and Brazil, through various European regions, to Singapore and China. While some chapters attempt to conceptualize the interconnections between cities and nature, others clearly have an empirical focus. Therefore, this volume provides a rich body of work and acts as a starting point for further studies on restoration of ecosystems and integrative policies such as the United Nations Sustainable Development Goals.*

---

*Rowman & Littlefield In this book, Sue Popkin tells the story of how an ambitious—and risky—social experiment affected the lives of the people it was ultimately intended to benefit: the residents who had suffered through the worst days of crime, decay, and rampant mismanagement of the Chicago Housing Authority (CHA), and now had to face losing the only home many of them had known. The stories Popkin tells in this book offer important lessons not only for Chicago, but for the many other American cities still grappling with the legacy of racial segregation and failed federal housing policies, making this book a vital resource for city planners and managers, urban development professionals, and anti-poverty activists.*

**CLIMATE CHANGE AND SUSTAINABLE URBAN DEVELOPMENT IN AFRICA AND ASIA**

---

*Springer This book is about African and Asian cities. Illustrated through selected case cities, the book brings together a rich collection of papers by leading scholars and practitioners in Africa and Asia to offer empirical analysis and up-to-date discussions and assessments of the urban challenges and solutions for their cities. A number of key topics concerning housing, sustainable urban development and climate change in Africa and Asia are explored along with how policy interventions and partnerships deliver specific forms of urban development. It is intended for all who are interested in the state of the*

cities and urban development in Africa and Asia. Africa and Asia present, in many ways, useful lessons in dealing with the burgeoning urban population, and the problems surrounding this influx of people and climate change in the developing world.

### **AN INTRODUCTION TO URBAN DEVELOPMENT AND MANAGEMENT**

---

*Routledge A world more urban... The world is undergoing massive urbanization, and is projected to increase from three to over four billion city dwellers, mostly in the developing world, within 15 years. This historic shift is producing dramatic effects on human well-being and the environment. ...but less poor Unplanned shanty-towns without basic services are not an inevitable consequence of urbanization and slums are not explained by poverty alone. Urban misery also stems from misguided policies, inappropriate legal frameworks, dysfunctional markets, poor governance, and not least, lack of political will. Urbanization and economic development go hand-in-hand and the productivity of the urban economy can and should benefit everyone. Living conditions for the urban poor can be dramatically improved with proper solutions, backed by decisive, concerted action. More Urban - Less Poor brings order to the complex and important field of urban development in developing and transitional countries. Written in an accessible style, the book examines how cities grow, their economic development, urban poverty, housing and environmental problems. It also examines how to face these challenges through governance and management of urban growth, the finance and delivery of services, and finding a role for development cooperation. This is essential reading for development professionals, researchers, students and others working on any facet of urban development and management in our rapidly urbanizing world. ### **LINKING INNOVATION AND LOCAL BENEFITS**

*World Bank Publications* Expansion and development of urban areas require acquisition of land, which, in turn, often requires physical relocation of people who own or occupy this land. Land acquisition and resettlement may also be required to improve the lives of the more than 1 billion people who currently live in slums around the world, most of them in developing countries. Therefore, any effort to embark on significant, sustainable urban development needs to ensure that there are adequate processes for land acquisition and, so that resettlement does not become a constraint to much needed urban development. Planners, policy makers and social scientists can try to implement urban development programs in a way that make people who lose their land, houses or livelihoods become equal partners in the development process. The combination of the high price of urban land, presence of creative individuals in close proximity in urban areas, and the ability of urban space to generate innovative solutions, can help convert urban resettlement into a development opportunity for all. The report illustrates how urban resettlement can become a development opportunity. The Mumbai example shows how the private sector can play a key role, to unleash the potential created by high-value land to provide sustainable housing solutions to those adversely affected, at no cost to the government or the resettlers. Examples from Morocco and Pakistan show how well designed and implemented, citizen-driven resettlement can result in enhanced skills and livelihoods, and can promote overall sustainable urban development. The Mauritania example demonstrates how collective approaches with strong community participation can help address difficult challenges related to housing. The Brazil case shows how resettlement practices with demonstrated, strongly positive outcomes and contributions to urban development can influence governments to incorporate them into their own laws and regulations, helping millions of affected people to benefit from them.
